PlaceBots (i.e., agents) provide for accessing, processing and managing data in a place. HTML may be dragged and dropped into a place, where it is parsed and corresponding place fields created. ~~MS Excel or Word documents may be dragged and dropped into a place, which creates a corresponding form, and users may create new documents using that form.~~ A place type comprising a template of an entire place, or collaboration space, may be used to create new places. Changes made to a place may be reported, subject to security controls, by

A quick browse feature provides a simplified format for browser windows based on selection of HTML links.
